

## Gas Safety Week logo: Guidelines for use

There are two versions of the Gas Safety Week logo:

(1) Yellow for use on dark backgrounds

(2) Black for use on light backgrounds

The logo is available in two colour models so that you get the best results if printed or used online.

RGB should be used if the logo is being placed online or on a TV screen.

CMYK should be used if the logo is being printed in leaflets or promotional material.

We would encourage you to use the logo in any promotional materials such as your website, leaflet and advertising to raise awareness of Gas Safety Week.

We recommend the Gas Safety Week logo is given plenty of room to stand out to enable the text to be seen. For a guide there should always be a clear area around the logo of the size of the letter 'G'.
